

7. Problem report

Actually, we have two main problems.

1. 10000 queries crash.

We have tried 10000 query operation on our system, but it crashed. 5000 query operations are ok. We think this phenomenon may result from the cache or memory.

2. Download too large file crashed.

The buffer in our system is 1M, which means when we download too large file, it may lost some information.
